## **DETAILED ACTION**

### ***Specification***

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1 and 4-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 is rendered indefinite because it does not provide a value defining y. It is unclear as to what y is in order to obtain luminescent emission.

***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Ellens et al., U.S. Patent Number 6,695,982.

Ellens discloses a phosphor having the formula  $(AS)^*w(B_2S_3):tD^{+2}$ , where A can be Ca and/or Sr, B can be Ga, D can be europium, w is 1.02-1.2 and t is 0.01-0.1. The phosphor in the Ellens reference can be rewritten as  $Sr_{1-x}Ca_xGa_2S_4:yEu^{+2}:0.02-0.2Ga_2S_3$ , where x is 0-1 and y is 0.01-0.1 (see abstract and column 2, lines 13-19). Additionally, the reference discloses that the application of phosphors as LED converters (see column 4, lines 60-61). Column 4, lines 47-50 of the reference discloses that the phosphor can be excited by short-wave radiation between 300 nm and 500 nm. Column 2, lines 20-53 of the reference discloses that the phosphor is fired under hydrogen sulfide initially at 800-1000 deg C and then fired for a second time at 800-100 deg C in a flowing H<sub>2</sub>S atmosphere.
